Dealer Notes

- Bond Fans can have up to 8 speeds.
- Driver automatically builds the amount of speeds based on the connected device.
- All speeds do not need to be utilized. Adjust the *Speeds Used* property to set which speeds should be used.
- In addition to the main toggle button there are two other buttons provided by the driver: Increase Speed and Decrease Speed

- These buttons work only with fans that have support for increasing/decreasing speeds (not fireplace fans)
- Fans may contain lights. Up to three lights may be available for control: Light, Up Light and Down Light.
- Lights will have control output connections that can be linked to the Bond Light driver.
- Bond Fan can be controlled using a Relay connection (ex. can be used with Control4's fan timer)
- By default the Bond Fan will be shown under Comfort in the installed room

Driver Setup

1. Connect driver with a Bond Bridge fan or a Bond Fireplace fan
2. If connected to Bond Bridge set *Speeds Used*, Bond Fireplaces always use Low(1), Medium(4), and High(8) speeds
3. If fan contains lights visit the Connections tab and bind the Bond Light driver to the light you wish to control

Driver Properties

- *Driver Status:* Displays driver related information
- *Driver Version:* Displays driver version
- *Driver Actions:*
    - *Reset Speeds Used:* Reset Speeds Used for toggling the fan
