Notes

· Make sure to allow for enough time to close the application and find the accompanying button that is unlocked by the Code Agent
· We suggest favoriting the Code Agent and the accompanying button in the same room right next to each other as shown in the example above
· If both Access and Control relay connections are not made when using the code type, the driver will enter an OFFLINE state
· Though the driver can be bound to any relay binding there may be limitations
   · Ex.: The lock proxy does not pass proxy commands correctly through the relay connection. There are workarounds but they are not recommended as they do not survive a reboot.
