Driver Setup

1. Setup Govee light with native app
2. Setup C4 Govee Gateway
3. Bind in Connections to Gateway device

Driver Properties

- *Cloud Status*: Displays driver license state
- *Driver Status*: Displays driver related information
- *Driver Version*: Displays driver version
- *Driver Actions*:
- *View Effects*: Prints a list of available scenes/effects to the Lua output.
- *Automatic Updates*: Allows the 'Cloud Driver' to automatically update the driver when a new version is available
- *Debug Mode*: Displays additional information on the lua tab for debugging purposes

Govee Settings

- *Device*: Displays the name of the connected Govee device.

Scenes

The ability to control Govee native lighting scenes is now available through your integrated smart home. The Govee driver will provide you with a controllable list

of effects available on the "Light Extras" section of Navigator as well as Composer Programming.

Driver Variables

In addition to all of the driver variables provided by the LightV2 proxy, the Govee Light driver comes with one other variable:

- *SELECTED_SCENE*: name of the active Govee scene/effect.

Support

If you require additional driver assistance or are having some issues please visit our help desk: <https://help.drivercentral.io>

Showroom and Free Trial

All Cindev drivers for Control4 come with a 7-day trial. Simply add the DriverCentral licensing driver, *Cloud Driver*, along with this driver and you can fully test the driver before purchasing. Including Cindev drivers in your drivercentral showroom project will give you unlimited use without purchase.
