Broadcasting Labels on Paradox EVO Panels

Sometimes a dealer will download zone labels from the security system and Zone 1, Zone 2, Zone 3 etc... will show up not the correct zone names (Front Door, Back Door, Motion).

Solution: Babyware (Paradox Security Software). Re-send all programming. This will update the zone labels on the PRT3 module. Then, download zone labels.

After the download, go to Control4 composer, and select Download Zone Labels from the Driver Actions menu

This should resync all the zone names correctly.
