## Overview

The Control4 Home Automation system can control nearly all aspects of a customer's smart home. Make your front door smarter with an August Smart Lock Pro + Connect. Go keyless to lock and unlock your door from anywhere with your phone. Give keyless entry to family, friends, or even the dog walker. The lock easily attaches to your existing deadbolt; use your existing key at anytime. Now available for Control4!

## Features

- Instant lock status updates
- Operate the lock
- View lock activity
- View lock users
- Activate routines or scenes based on lock events
- Get push notifications within Control4
- Secure - uses OAuth implementation so there is no need to access customer account info

## Driver Setup

1. Setup your August Smart lock with August Connect iOS or Android app and verify functionality prior to integrating.
2. Add (1) August Gateway driver.
3. Enter customers email address in the email field. The customer will receive an email with a link to connect their August lock to Control4.
4. Note: If the customer does not receive the email, instruct them to check their email spam folder.

5. When the customer successfully authorizes Control4 access to the driver you may move on to the next steps.
6. Add (1) August lock and (1) Control4 Generic Door Lock for each lock that is in your August account.
7. For each lock Bind your August Smart Lock "AUGUST\_LOCK" connection to the appropriate binding on the gateway.
8. For each lock bind your August Smart Lock "RELAY" binding to the Control4 Generic Door Lock.
9. If you own a August Smart Lock with DoorSense, an additional contact sensor binding will be made available on the August Lock driver. You may combine this contact sensor binding with the generic Door Contact Sensor.

## Driver Properties

- Cloud Status: Displays driver license state
- Driver Status: Displays driver related information
- Driver Version: Displays driver version
- Driver Actions:
  - Display Status: Displays general history and event information on the Lua tab
  - Test Service Email: Sends a test email to the service email provided
  - Test Customer Email: Sends a test email to the customer email provided
  - Set Up Tracking Light and Thermostat Issues: Sets up variable monitoring (see Dealer Notes)
  - Run Project Validation: Checks to make sure the composer software is configured correctly (see Dealer Notes)
  - Test Lighting: Tests lighting devices in the project (see Dealer Notes)
  - Download Latest App: Downloads the latest webview app if a newer version than the one stored in the project is found
- Automatic Updates: Allows the 'Cloud Driver' to automatically update the driver when a new version is available

- **Debug Mode:** Displays additional information on the lua tab for debugging purposes

## Dealer Notes

As drivers with version 20220324 and above authenticate through a separate server then 2009 versions and below of the driver (and as such are registered in a separate database) webhooks and refresh tokens may not be available when updating from version 2009 that was installed after March 24, 2022. Since registrations prior to March 24, 2022 have been replicated to the new database all previous installations of the legacy driver will update without issue. If this issue is encountered the driver will need to be reset and re-authenticated after updating to version 20220324 and above.
