Trigger announcement on UniFi Doorbell press

Description

The Customer would like an announcement to play on their speakers in the home when the doorbell is pressed.

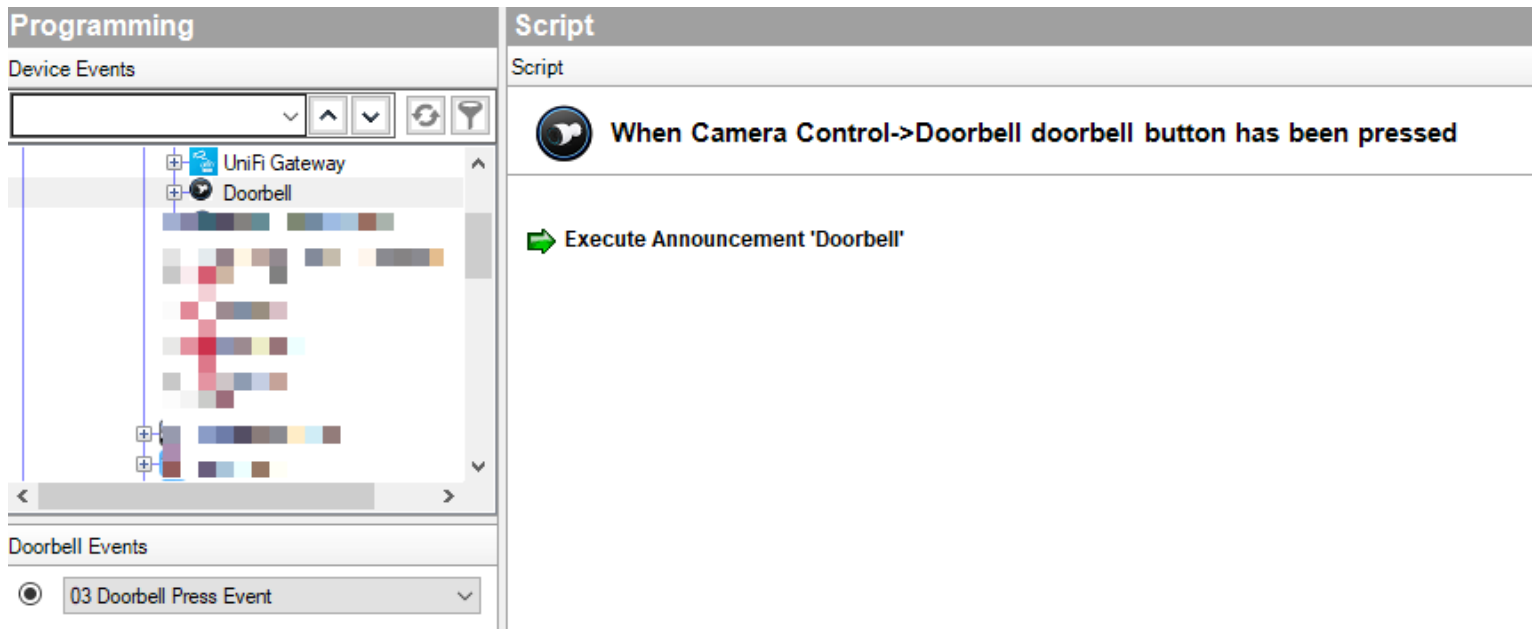

Drivers In Use: UniFi Protect Camera (NVR) driver.

Installer Note: The UniFi Protect Camera driver binds to the UniFi Protect Gateway driver.

Integration

- Create an announcement you want to trigger when the doorbell is pressed
- Under Programming, find the UniFi doorbell and select the action: When doorbell is pressed
- Add announcement to event
- Test

The screenshot displays the UniFi Protect programming interface, divided into two main sections: **Programming** and **Script**.

Programming: This section shows a tree view of device events. Under the **UniFi Gateway** device, the **Doorbell** event is selected. Below this, a list of events is shown, with **03 Doorbell Press Event** selected.

Script: This section shows the configuration for the selected event. The script is titled **When Camera Control->Doorbell doorbell button has been pressed**. The action is **Execute Announcement 'Doorbell'**.
