

The Magic Icons driver has been discontinued because the Magic Buttons driver can perform the function of generating clicks without opening a button screen, starting from version 1150.

To do this, choose the following property: Icon Click Behavior “Do Nothing”

The final version of the Magic Icons driver is 1120. If your version is earlier, update to the final version. For new projects, use only Magic Buttons, as Magic Icons will no longer receive any updates.

Thank you,
