

Integration Note

Manufacturer:	Gemstone Lighting
Model Number(s):	Hub2 Controller
Core Module Version:	9.0 Build 17.0 Rel
Driver Developer:	Cindev
Document Revision Date:	Feb 11 2026

Overview & Supported Features

This driver is a Lighting Controller driver that will give you access to the standard Lighting Interface and select Patterns/Scenes from a Nice Interface.

THE FOLLOWING OPTIONS ARE SUPPORTED BY [THIS DRIVER]:

- Lighting Control (Brightness 0-100%)
- Single Color/RGB Selection
- Pattern Selection (Scenes)
- Customized Brightness + Speed setting for all patterns
- Custom Pattern Selection/Customization
- Universal Function Triggering for Custom Patterns

THE FOLLOWING PLAYBACK OPTIONS ARE NOT SUPPORTED BY [THIS DRIVER]:

- Color Temperature control values
- Only one Gemstone Light per driver instance

Any feature not specifically noted as supported should be assumed to be unsupported.
--

[Driver] Configuration

Once the Gemstone Lighting product is working from the Manufacture's App:

- Add Driver into the Lighting Controllers section
- Click "Import" at the bottom and select the Gemstone_Lighting.EDRVC
- Select Gemstone Lighting Controller to add into the system
- Enter the IP Address of the Controller
 - At this point, the driver will display the status code: **GREEN / 200**. If it does not display check your IP settings and the controller is connected to the network

At this point, the driver is set up and should be able to control the lighting zones and execute the patterns.

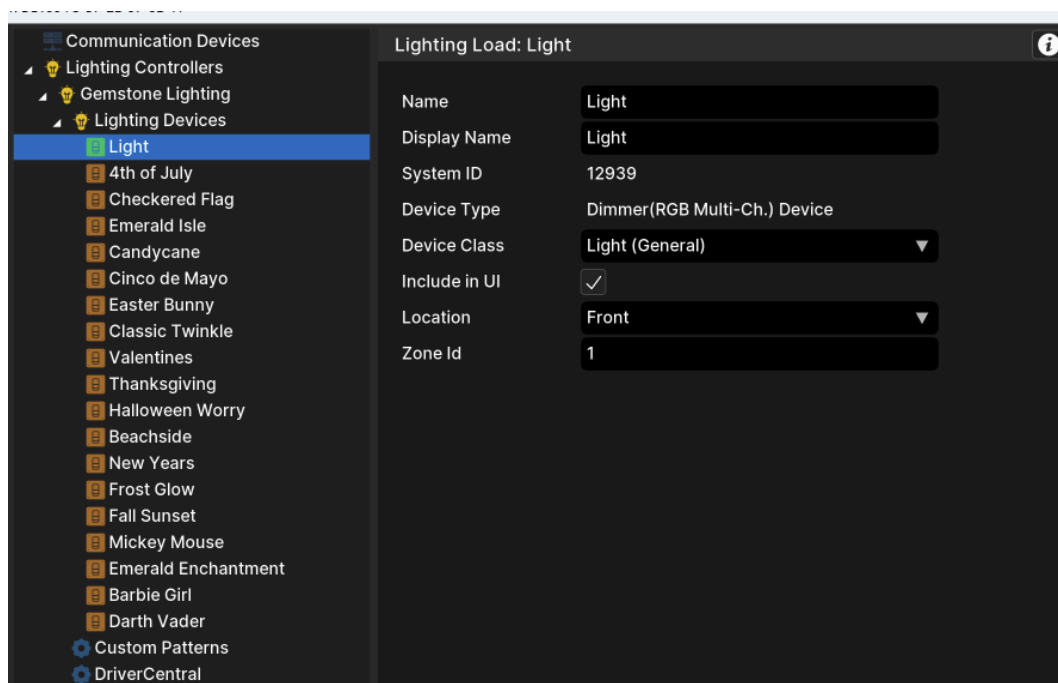

[Hardware/Tech Support]

For installation/integration support contact the manufacturer directly:

<https://www.gemstonelights.com/support/elan/>

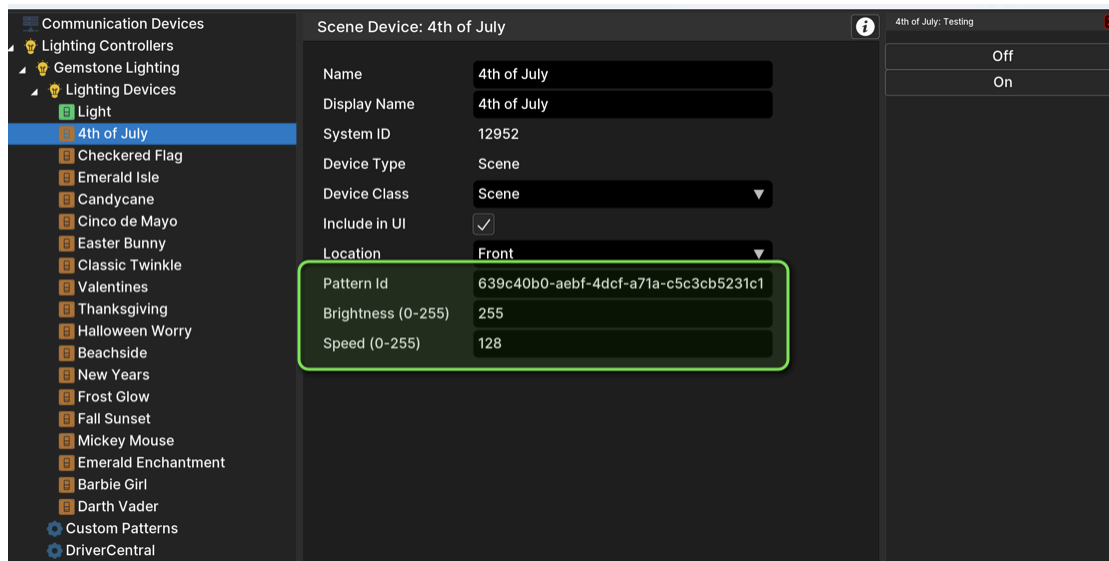

Light Zone Configuration

The driver enables the Light interface with support for On/Off/Toggle, Dimming and RGB control. Standard Nice components that interact with these items are supported. Below is an example of Lighting Zone configuration page:

Light Scene/Pattern Configuration

The driver supports lighting Scenes or "Patterns" as Gemstone refers to them. All Patterns and ID and many attributes describing how the scene will behave. In Nice/ELAN driver setup, a SCENE is defined as an ID, Brightness and Speed Value (see image below). When the driver is first installed, a common set of SCENES are automatically added and linked. These can then be used/deleted/changed according to the project needs. Dealers can add custom SCENES by entering the PatternId, Brightness and Speed values.

SEE APPENDIX AT THE END OF THIS DOCUMENT FOR A COMPLETE LIST OF PATTERNS

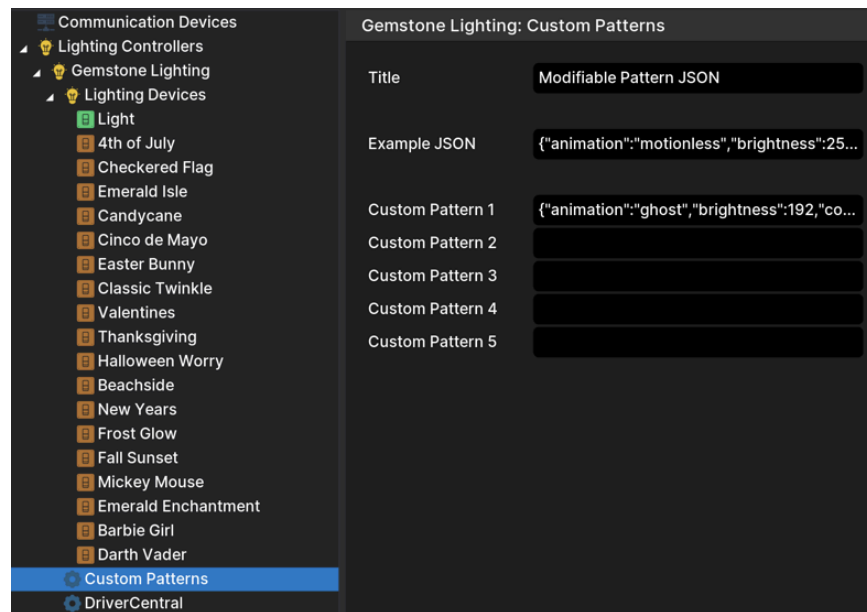

Custom Pattern Configuration and Selection

The driver also supports completely custom Patterns using the pattern JSON Object in one of five "Custom Pattern" properties. The Custom Page "Custom Patterns" contains 5 properties where a custom JSON object can be stored and then used with "Universal Functions" in Nice/ELAN programming.

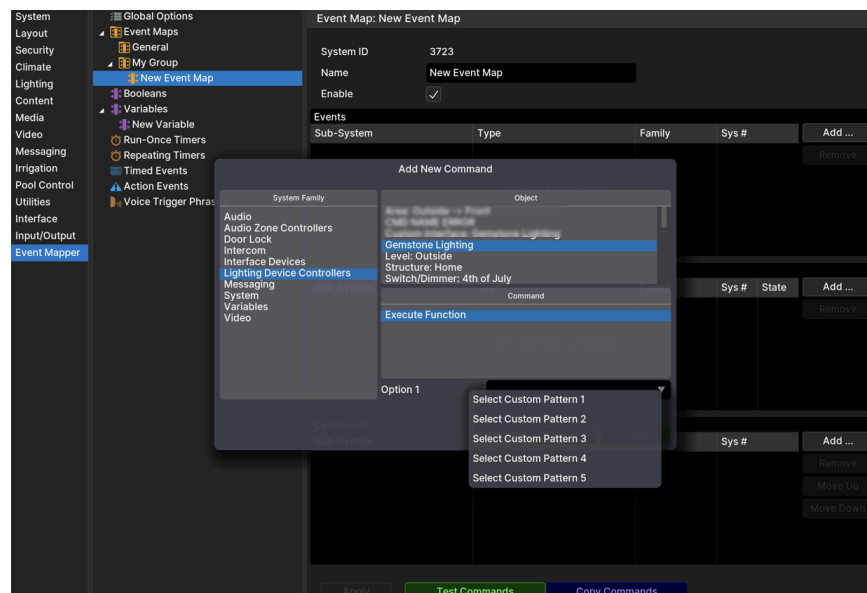

To Use Custom Patterns:

- Copy Example JSON property and edit the needed fields
- Paste the valid JSON object into one of the "Custom Pattern" Properties under the Custom Page "Custom Patterns"
- Under "Event Mapper" section
 - Select Add New Command
 - Select "Lighting Device Controllers"
 - Select the Gemstone Lighting
 - Select specific Custom Pattern to trigger and add to Triggered Event.

{Custom Pattern Page}

{Event Mapper -> Execute Function}

COMMON MISTAKES

1. "My Nice Systems isn't tracking when I change something from the Manufacture Lighting App." The driver polls Gemstone Lights once every 5 minutes. Dealers can use the "Get Info" command button to obtain lighting data immediately.

APPENDIX: PATTERNS

Below is a table of all the possible patterns and their default brightness and speed settings.
