

Movie Night 1058 — release brief

Movie Night adds a movie and TV screen to Control4 touchscreens and the Control4 app. The household browses films and series, watches trailers, sees where each title streams, keeps favourites, and plays a title with one tap on the room's Apple TV or Google TV.

Version	1058
Released	23 October 2026
Driver file	Movie_Night_DriverMate.c4z (keep this exact file name)
Control4 OS	4.0.0 or later
Licensing	DriverCentral or DTI activation, either one is enough; a new install starts a 30-day trial
Works with	An Apple TV or Google TV controlled by a DriverMate driver
Needs	Internet access on the controller; a TMDB, a YouTube and a Movie of the Night (MON) API key

What is new

- **The screen sets itself up.** The first time the driver loads, and again after a driver update, it prepares its screen by itself. This takes about two minutes and needs internet access.
- **The Watch menu.** When you choose the **Streaming Device**, Movie Night puts its button in the room's **Watch** menu. A new action, **Show in Watch Menu**, does it again whenever you want. Refresh Navigators afterwards.
- **One file, two licence systems.** DriverCentral licensing and DTI activation are both in the same driver file. Set **Activation Method** to the one you bought.
- **A dealer manual.** A short setup manual is supplied as a PDF, and the **Documentation** tab in Composer has the setup guide.
- **Bigger Watch On icons** with a play badge.
- **Clearer messages and a steadier first start.** **Last Message** and **Last Error** say what happened and what to do.

Before you update

- **Control4 OS 4.0.0 or later is required.** On an older OS the driver shows **DRIVER DISABLED** in **Driver Version**. Update the controller first, or keep the earlier Movie Night driver on it.
- **After an update the screen prepares itself again.** For a minute or two the button shows a status screen. The controller needs internet access and a valid licence or trial.
- **Check that Driver Version changed** after the update. If it did not, Composer kept the old code.
- **A system that already has a Streaming Device chosen** is not asked about the Watch menu again. Run **Show in Watch Menu** once.

In this package

File	What it is
Movie_Night_DriverMate.c4z	The driver, DriverCentral and DTI release, version 1058
Movie_Night_Manual_v1058.pdf	The dealer manual: getting the keys, setup, properties, actions, fixes
Movie_Night_Release_Brief_v1058.pdf	This brief
Movie_Night_1058_Revisions.txt	The same changes as plain text, for the version notes on DriverCentral
