DOMOSAPIENS DYNAMIC PRESET MANAGER DRIVER

This driver enables you to easily set the Preset value of a group of V2 lights from Control4 programming. This is meaningful for dimmers only, of course (no harm done if switches included).

INSTRUCTIONS

- Use the free trial period or activate the driver at any time by assigning to this project the license you purchased from the driverCentral website (requires the DriverCentral Cloud driver). You may use multiple copies of this driver in your project.

- Install one instance of this driver for each group of lights where you wish to modify the preset level dynamically. Rename each instance to a meaningful name such as 'Second Floor Presets'. This name will be available in Programming commands.

- Select the V2 lights targeted by this instance of the driver, as well as a default preset level (this is optional).

- Based on Scheduler events, , Keypad Button presses, Experience Button presses or any other relevant trigger event, use a Device Specific Command in Programming to change the preset level of all the selected lights to a specified value (or to the default value).

SUPPORT

For support on this driver please go to https://help.drivercentral.io/. Give a detailed description of the problem and also include the version number of the driver and the version of Control4 OS that you are using.

AUTO UPDATE

This driver is updated with fixes and new features from time to time. To ensure your project uses the latest version, set the Automatic Updates property of the driver to On.
